

### Smart Spreading

- The Smartspread Live can be supplied with its own 10" Tablet or it can link to the ISOBUS on the tractor. It can also be linked to the JD Harvest Lad System.

## SmartSpread Live

- SmartSpread Live which is linked to your FLOWMeter will calculate the optimal live travelling speed for the farmer's specified volume, in relation to the live output of the flowmeter. It can be calculated in cubic meters or gallons and in hectors or acres.
- It provides live information on current flow rate and total volume spread per hour or per farm. It will show the live the traveling speed of the tractor and it will give the recommended travelling speed for what to match the amount of slurry the operator wants to apply per acre or hector.

## Smart Spreading

## SmartSpread App

This application tells the operator of any slurry applicator what speed to travel at to match the slurry spreading requirements of the farmer.

- This App can be used with either umbilical slurry spreading equipment or with slurry tankers.
